Phone: +972-52-473-9307 | Email: jorgemecher@gmail.com | LinkedIn | Portfolio | Ramat Gan, Tel Aviv District, Israel

Automation engineer with 10+ years building QA automation frameworks, developer tooling, and CI/CD infrastructure at Cellebrite, now focused full-time on applied, agentic AI development. Hands-on builder of full-stack production applications on the Anthropic Claude API spanning conversational reasoning, coaching/analysis, and persistent-context architectures. Fluent in the modern agentic toolchain (Claude, Claude Skills, MCP, Cursor-assisted development) and in translating ambiguous business needs into working prototypes and production builds. Track record mentoring engineers and driving AI-assisted development adoption across teams.

Professional Experience

2017 – Present — Cellebrite — Automation Developer

Enterprise digital intelligence company. Building agentic AI pipelines (LangGraph-style architecture, LLM decision layers) alongside QA automation and developer tooling.

- Designing and building an agentic Outlook email-processing pipeline for integration-failure alerts: Outlook → n8n → Azure Service Bus → Azure Function App (Node.js/TypeScript), where an LLM reads each email plus DB history and orchestrates MCP tool calls — including Puppeteer browser automation that logs into the integration platform and auto-retries failed jobs — with runs logged to PostgreSQL for audit and future context.
- Architected as a multi-folder, multi-tool platform so new email sources and actions plug in without core code changes.
- Implemented AI-driven automation accelerators using AI-assisted development to improve engineering efficiency.
- Designed and implemented a BDD automation framework in JavaScript; maintain C# and Node.js automation frameworks.
- Built reporting services integrating third-party APIs; lead UI and API automation using WebDriverIO.
- Leveraged AWS automation environments; integrated GitHub Pages for QA documentation.
- Mentor engineers on automation, testing, and AI-assisted development; advocate for agentic and low-code AI tooling.

2013 – 2017 — SafeNet — Automation Leader

- Developed a C# automation framework and led a small automation team.
- Introduced modular testing practices to improve maintainability and reuse.

2010 – 2013 — HP Software — QA & Automation Feature Lead

- Owned QA planning, testing, and reporting for feature areas.
- Led automation framework selection for product teams.

Personal Projects

2015 – Present — Empathy (Tyrell) — shadowly.ai

- AI companion product with zero-knowledge privacy and layered long-term memory for Daimon — Socratic, reflective conversations over months and years that build the user's evolving "twin."
- Client-side AES encryption (DEK dual-wrapped under passphrase + recovery questions); three-tier client-side memory (observations, profile synthesis, structured recall).
- Stack: Next.js (App Router), Vercel, Supabase, Anthropic Claude API; CI/CD with Playwright E2E, RLS, and versioned Postgres migrations.

Chess Coach — Live demo

- Full-stack AI chess coaching app: PGN/FEN paste or chess.com/lichess screenshot import via Claude vision; Socratic coaching instead of direct best-move answers.
- Hybrid architecture: Claude for pedagogy; Stockfish + chess.js for objective evaluation, legal moves, and tool-called line simulation.
- Branching move-tree UI, board editor, beta access with token budgeting. Stack: Next.js, Supabase, Claude, Stockfish.

Core Skills

- **Agentic AI & LLM Engineering:** Anthropic Claude API, agentic workflow design, MCP tool integrations, prompt/system-prompt design, Claude Skills, persistent-context architecture, responsible AI practices.

- **AI-Assisted Development:** Claude + Cursor workflow, rapid PoC-to-production iteration, low-code/no-code AI tool evaluation.
- **Full-Stack Development:** Next.js/React, Node.js, TypeScript, Supabase (Postgres + Auth), REST APIs, end-to-end product architecture.
- **Automation & QA:** C#, JavaScript/Node.js, Selenium, WebDriverIO, API testing, BDD (Gherkin), test architecture and framework design.
- **Cloud & DevOps:** AWS, Vercel, Jenkins, GitHub Actions, CI/CD.
- **Enablement & Leadership:** Mentorship, technical workshops, AI-adoption enablement, cross-functional collaboration.

Education & Continuing Development

Software Practical Engineer

Ongoing self-directed study: applied prompt engineering, agentic system design, and responsible AI practices (Anthropic technical documentation and research).
